exp.federal

This company provides A/E drawing sets for government clients. Unfortunately, I can't display the work I've done for over a year. I worked on all types of draft work and renders for various government projects during my time here. I learned a lot and am glad I was able to grow as an individual at exp. Some projects that I worked on are now official and those are shown in these images.

Faculty Sponsors

Faculty who are interested in creating new media and content for research and curriculum. They are looking for creators to help them on their teams.

Student Creators

Students who are creative and passionate about making games. They help to design, program, manage, and create art and audio for these projects.

The Studio

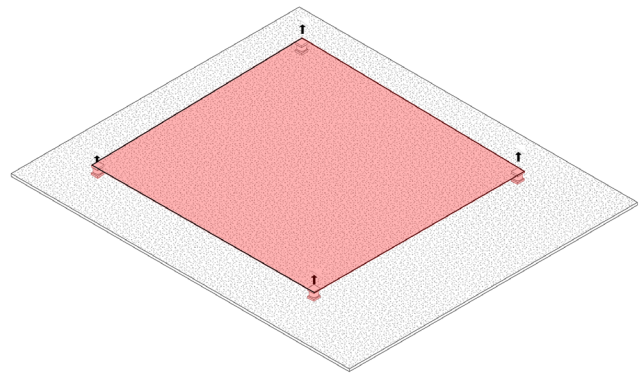

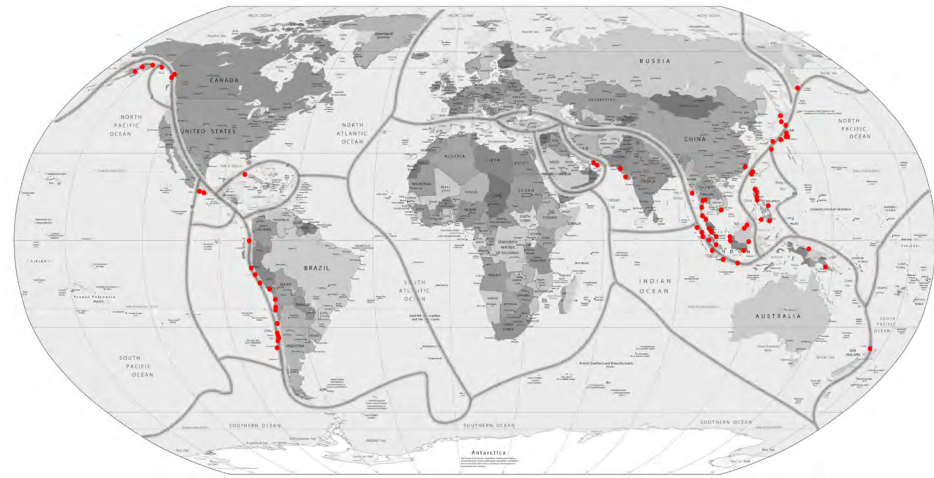

Working as an Art Liaison for a start up studio within UIUC. The Studio taught me how to navigate and communicate with a small team and work from the ground up. I was able to help build up a studio from zero that now has multiple ongoing projects, designing and developing video games to help with learning and research within the classroom.

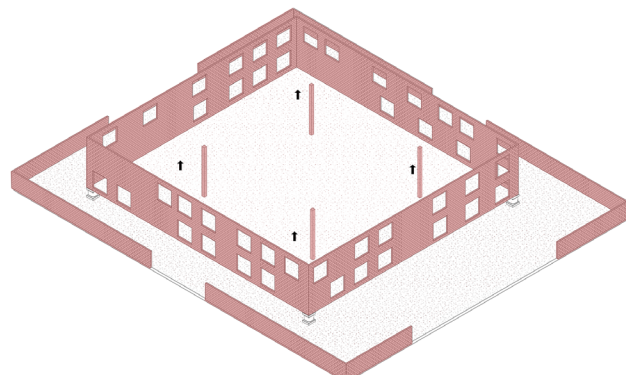

Quake Proof Nexus

Concrete Competition Senior Year 2023

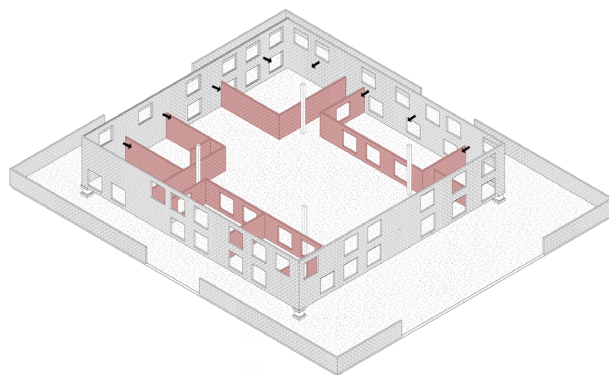

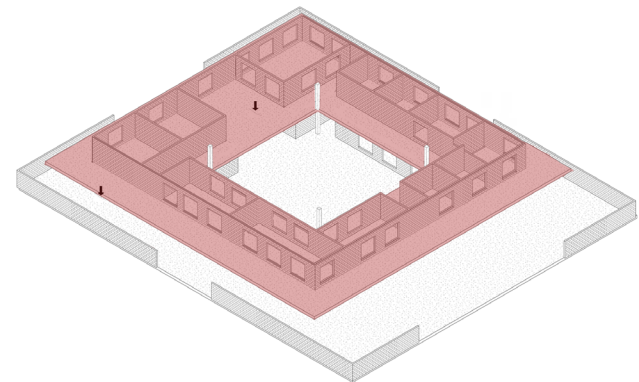

1. Foundation is laid down for the whole site. Seismic base isolators are added for the building.

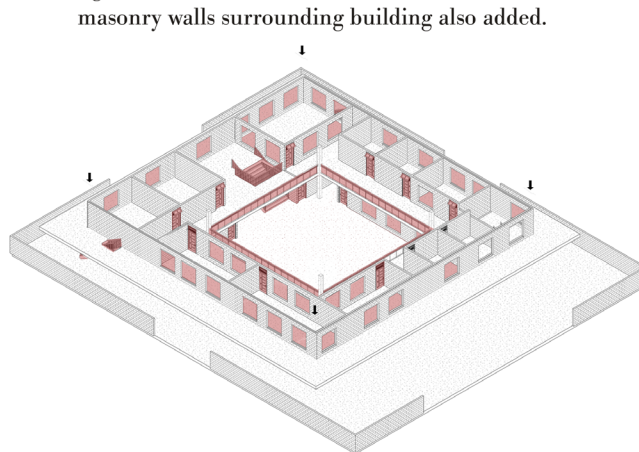

2. Exterior steel-reinforced concrete masonry unit load bearing walls and concrete columns constructed. Concrete masonry walls surrounding building also added.

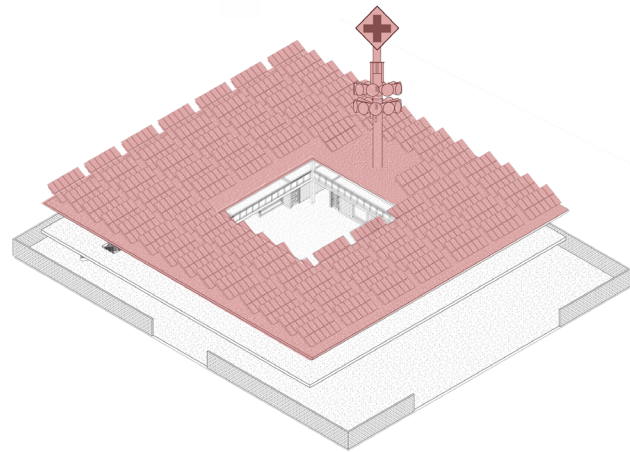

3. Interior CMU walls for first floor added.

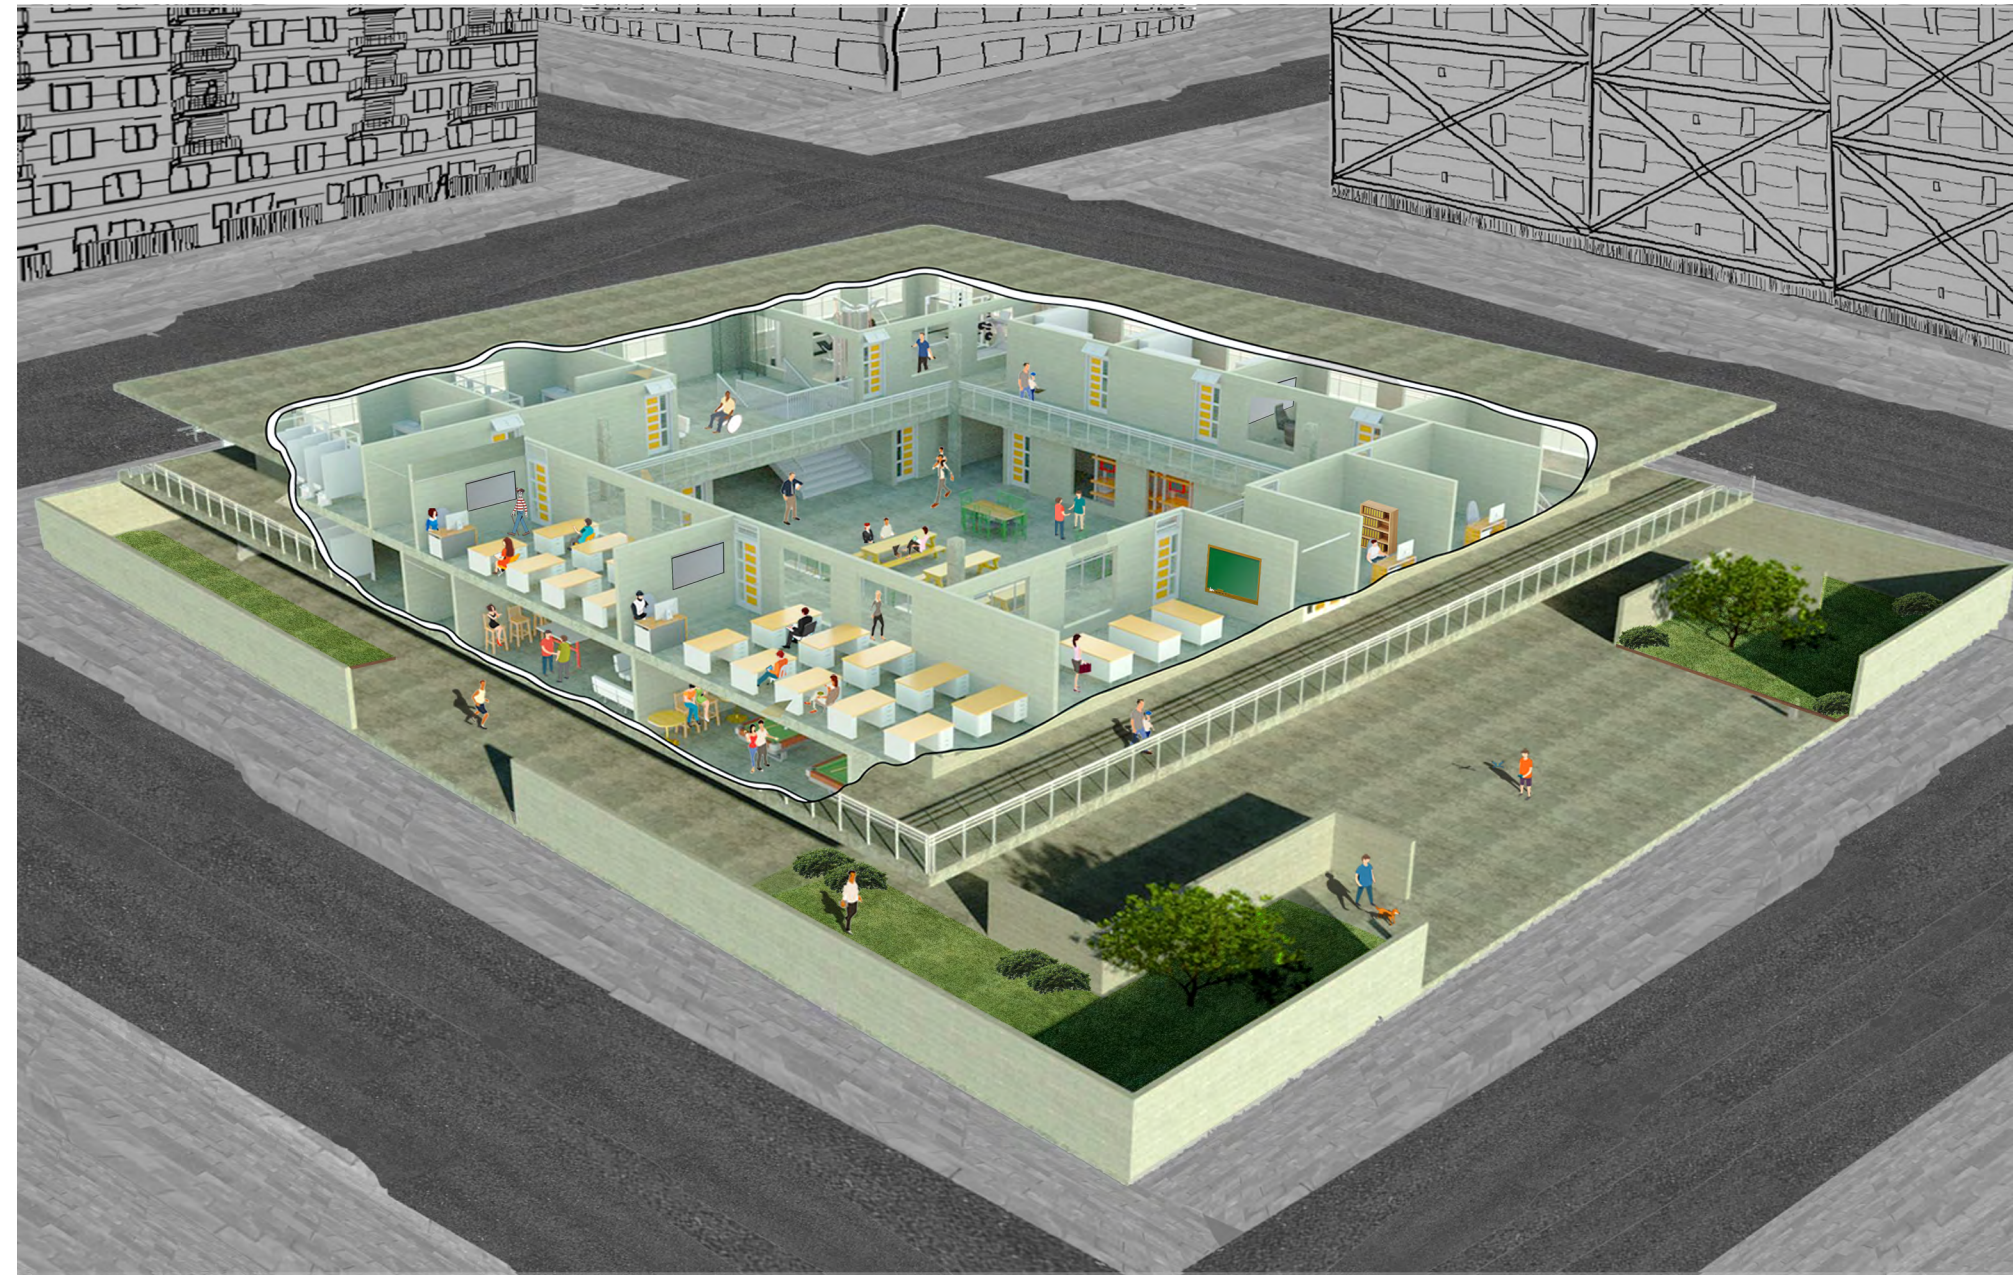

4. Second concrete floor of building added as well as second floor interior CMU walls.

5. Staircases, railings, doors added. Glass for windows if necessary based on site among other specifications.

6. Roof added with opening. Glass or closed roof may be installed if necessary. Solar panels, sirens, and decorations added if able.

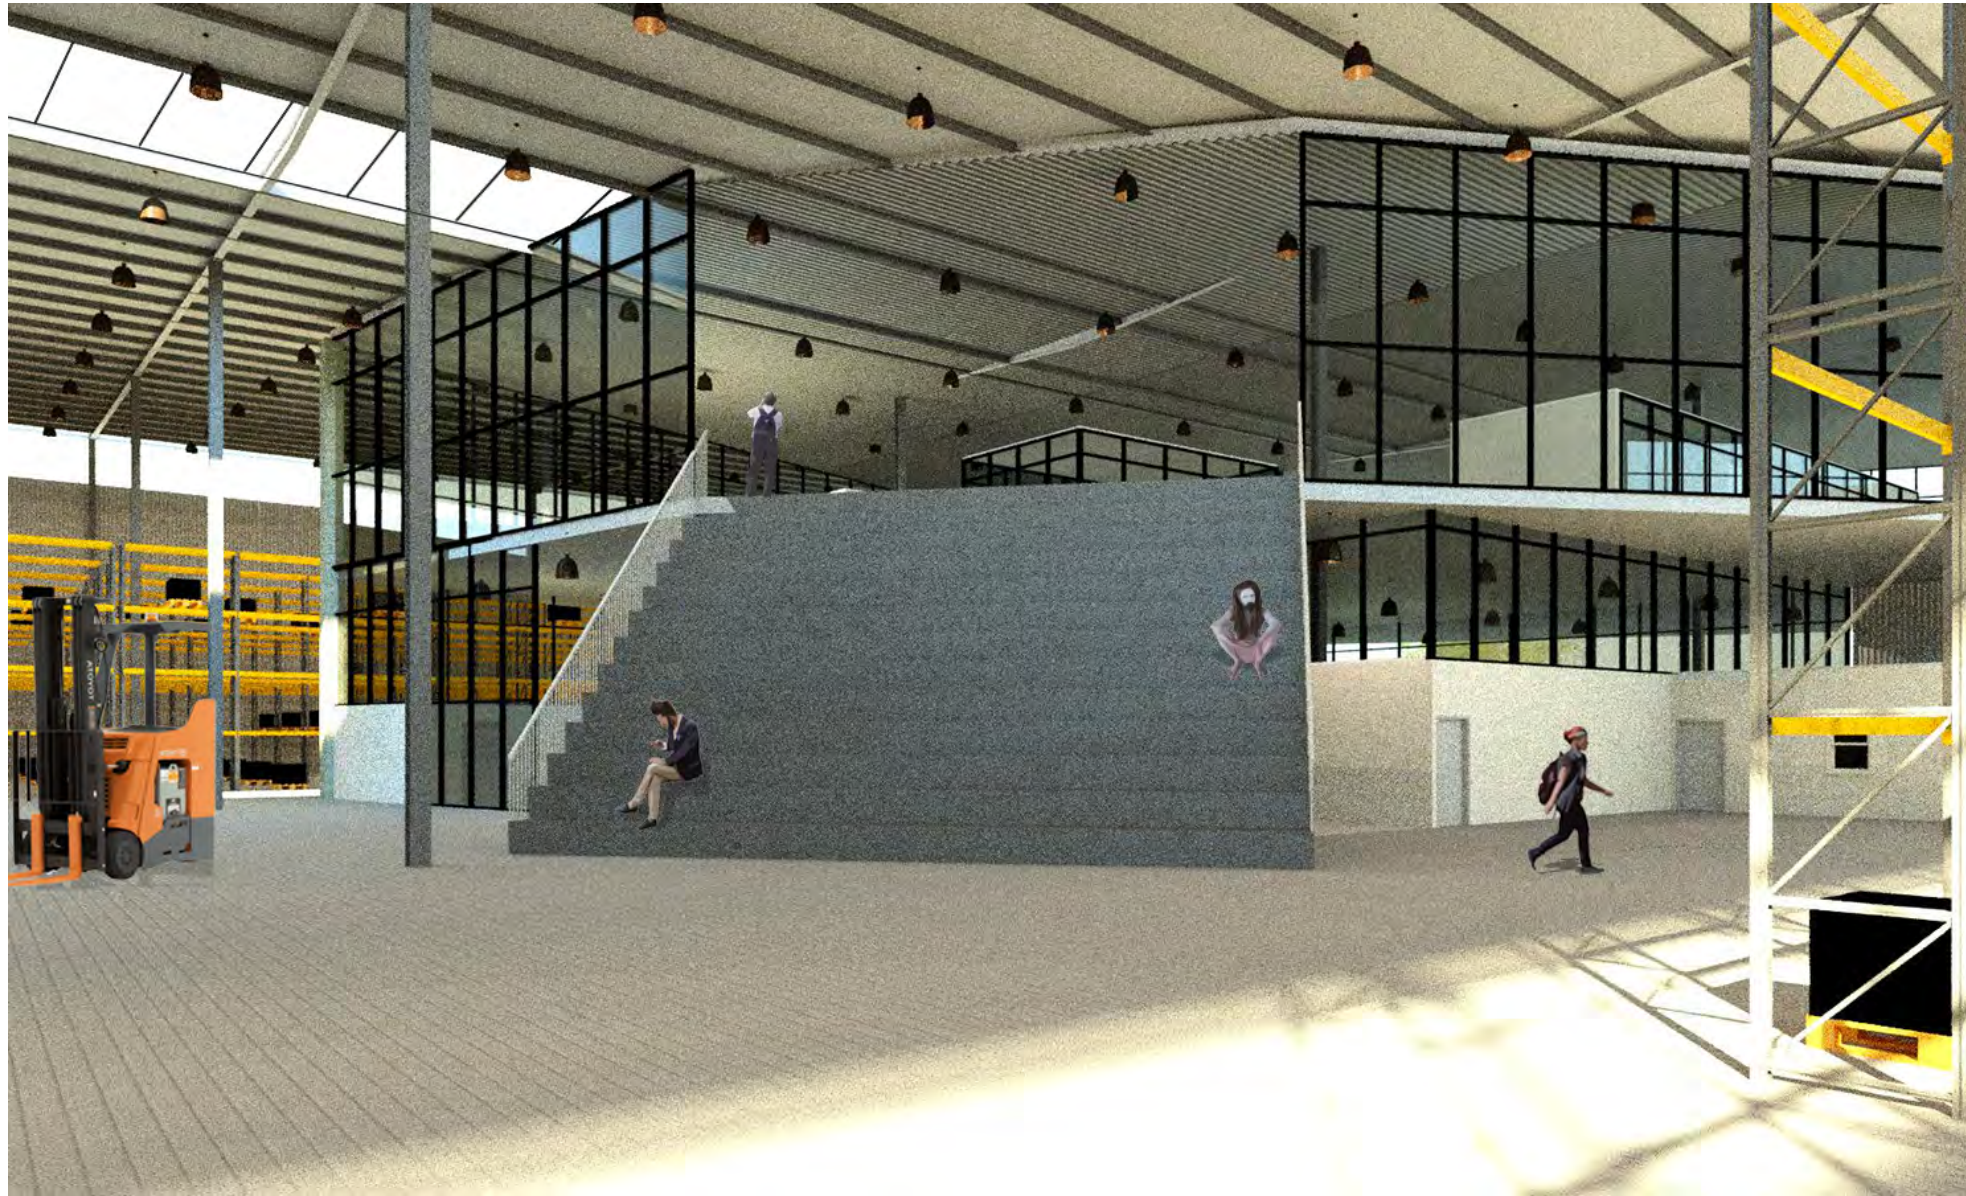

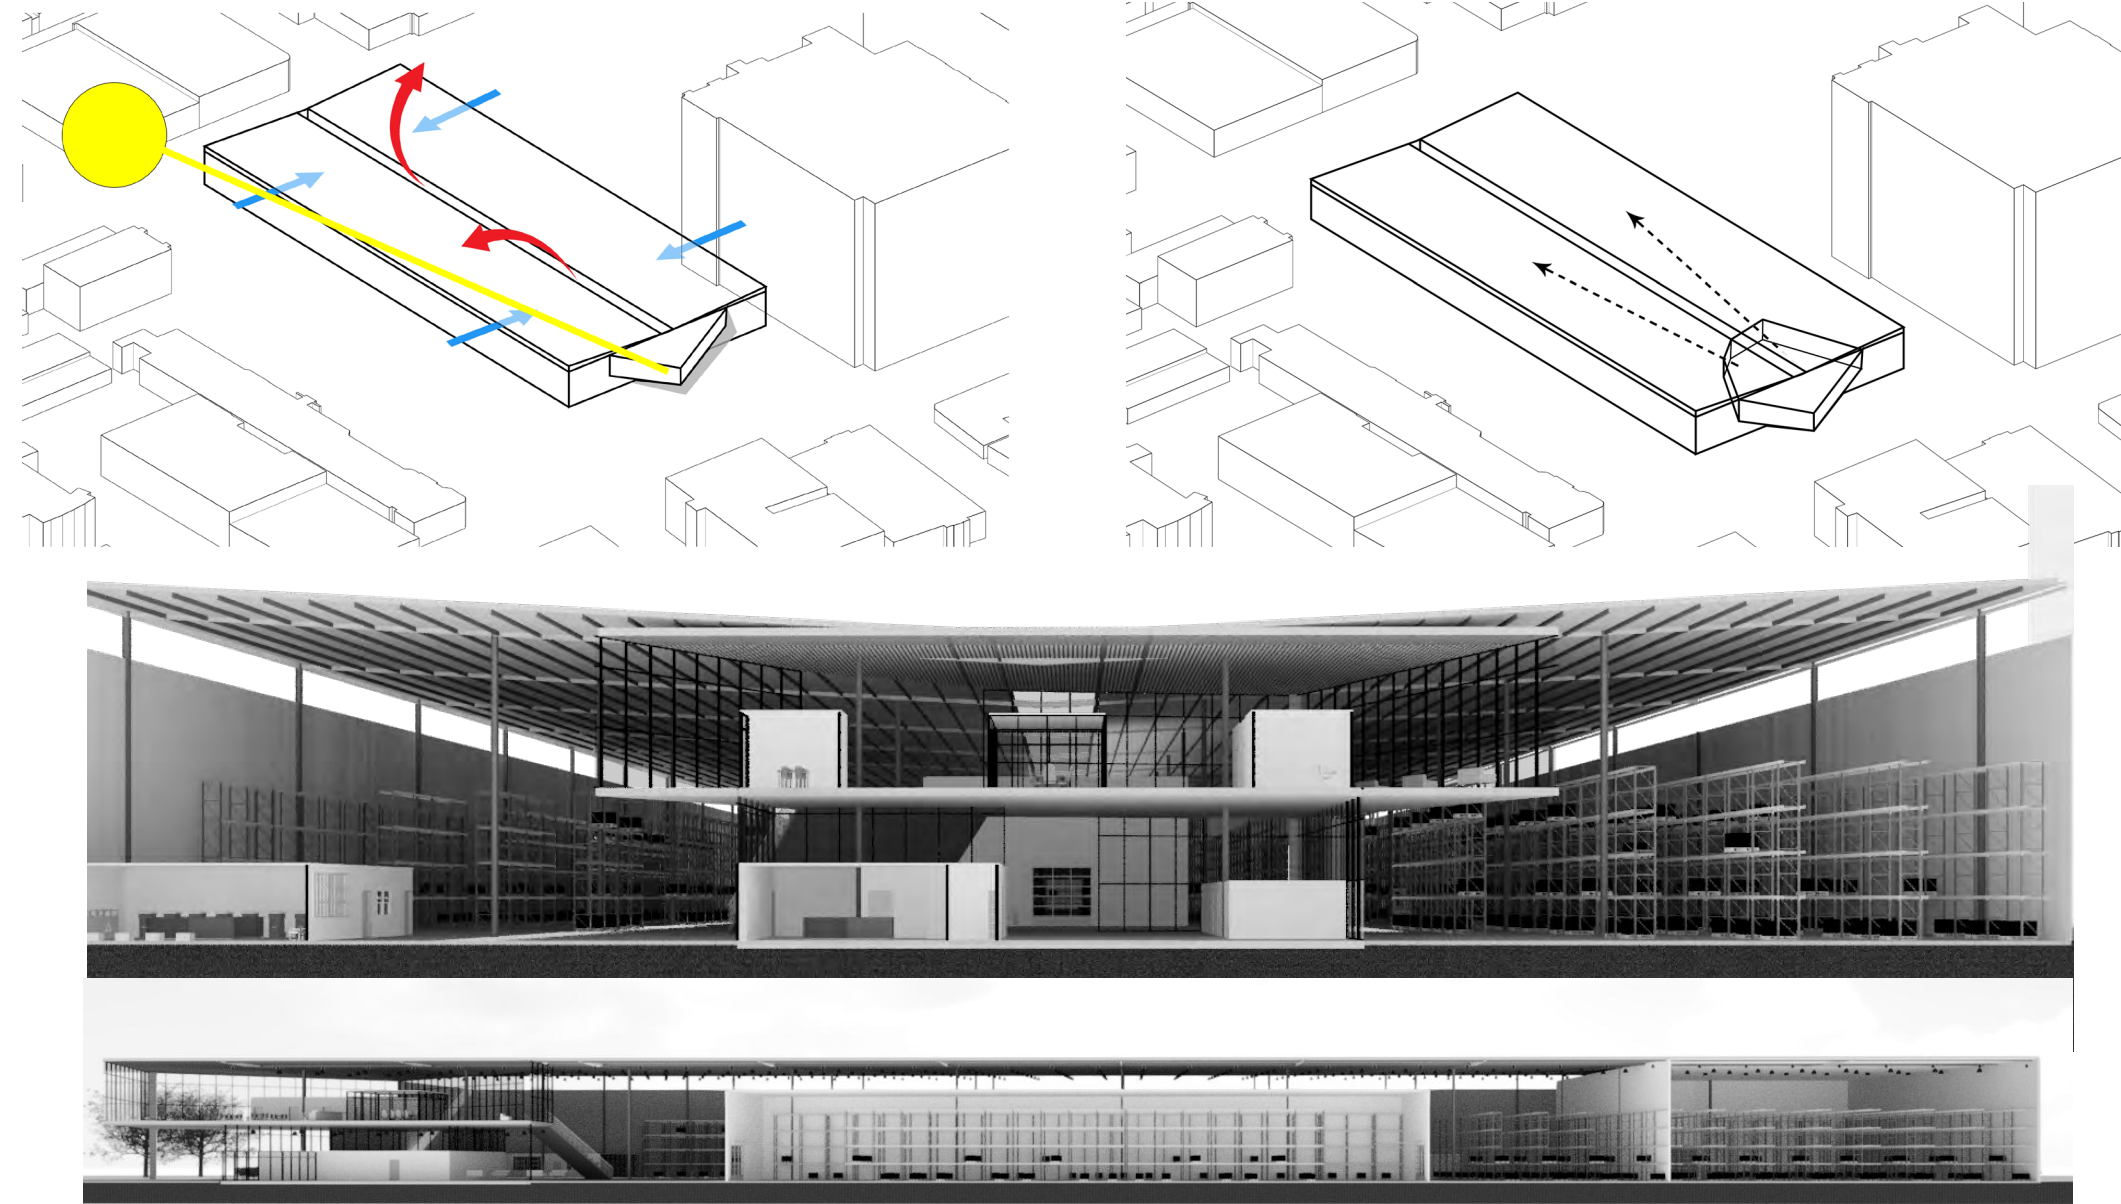

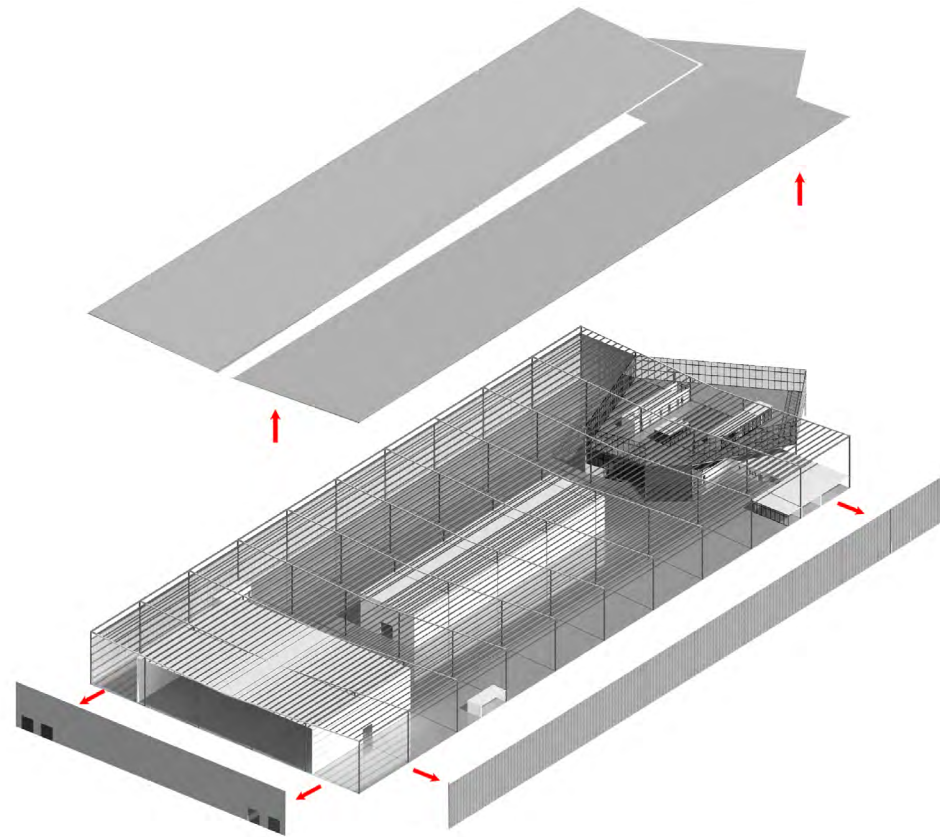

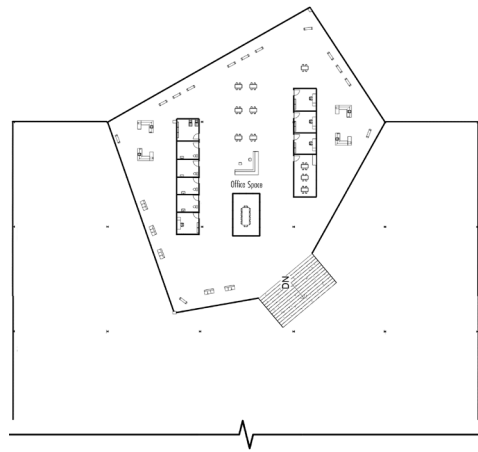

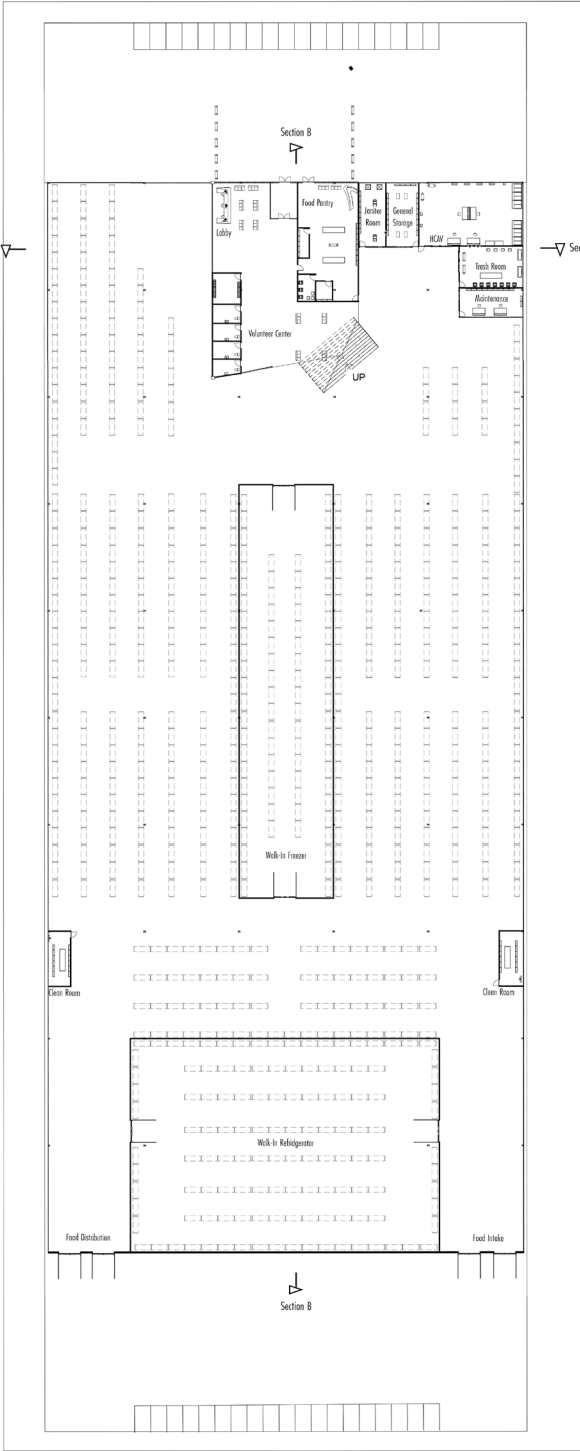

Observation Point

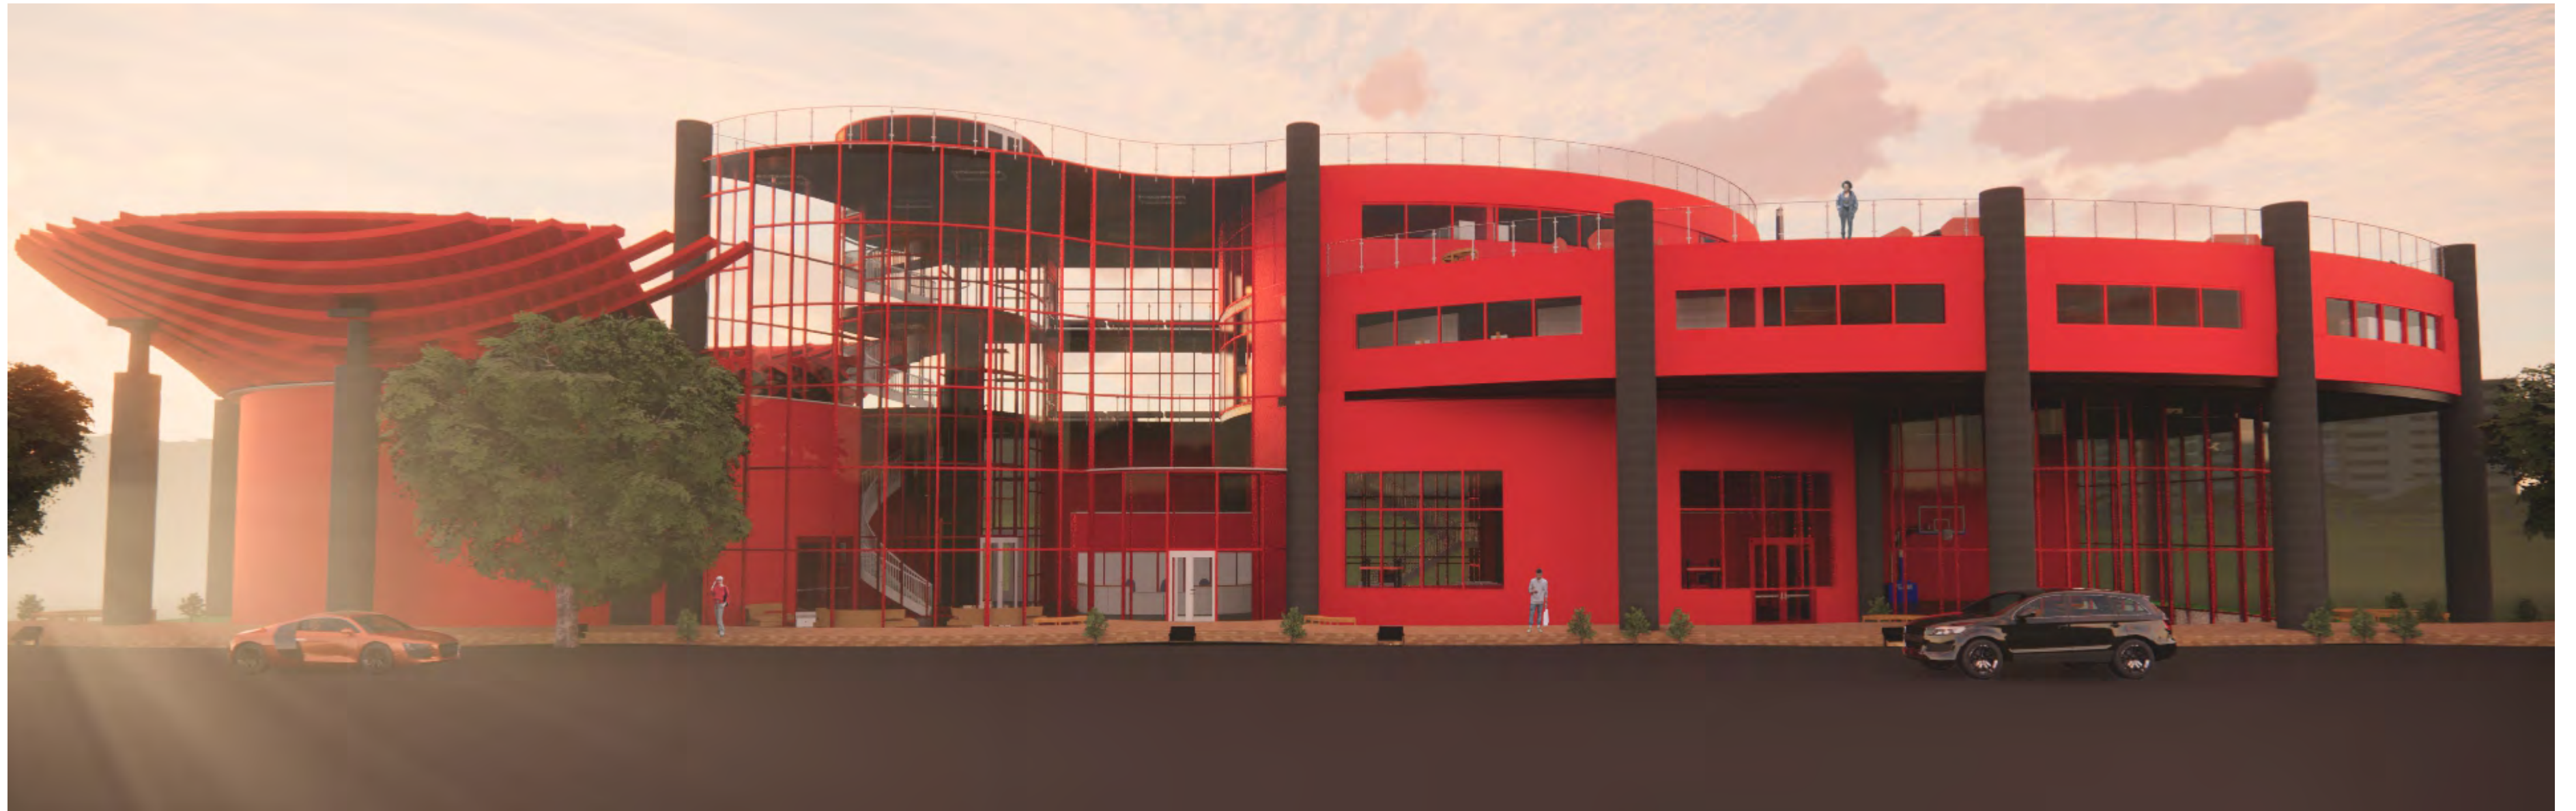

Senior Studio 2023

The final project of my fall semester in senior year. The goal was to design a 100,000+ sqft foodbank, based in Southern Los Angeles. I ended up designing a steel structure with a standing seam metal shell. The open butterfly roofing allows for natural sunlight and ventilation. The majority of the space is dry goods, which can be stored in standard LA climates. Frozen goods are stored in the center and back of the structure. The entrance and office spaces are contained in a mezzanine design, separate but contained in the whole warehouse. This was chosen to enhance views and efficiency in the warehouse, workers and volunteers would be able to see shipments come in and routing in the warehouse.

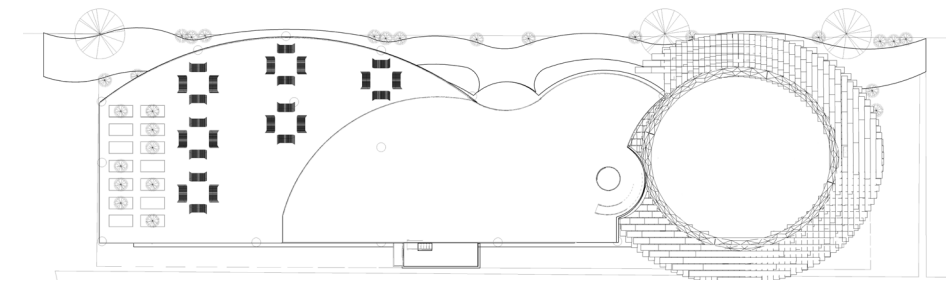

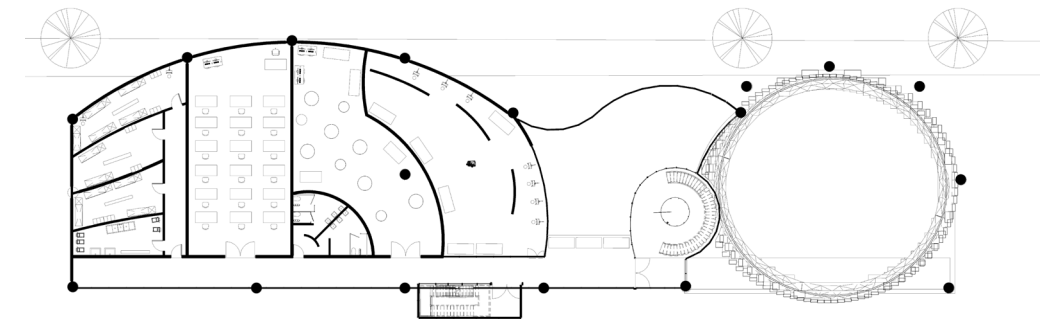

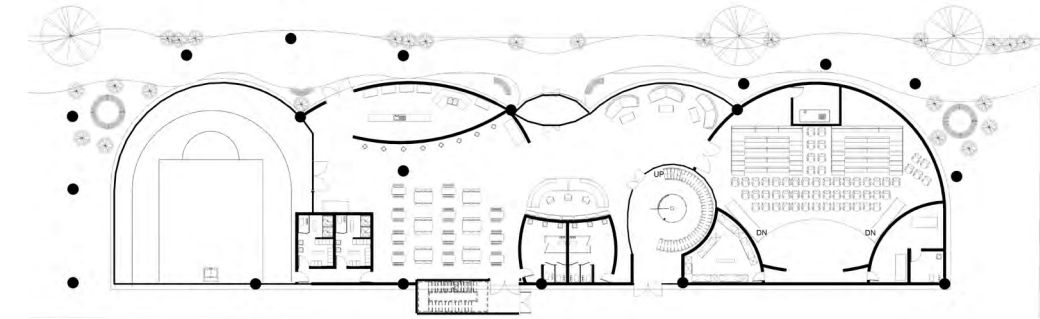

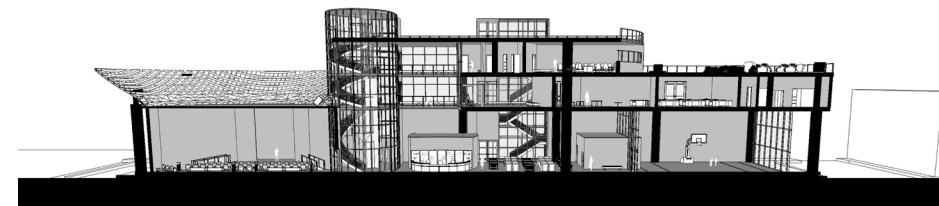

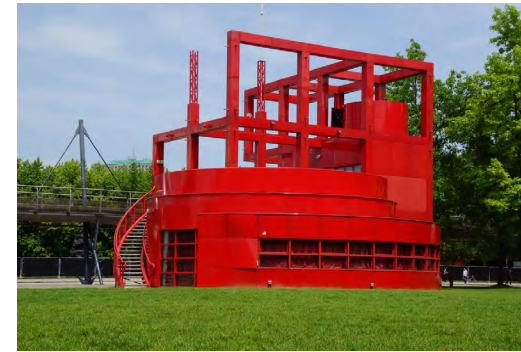

Albany Park Playground

Junior Studio 2022

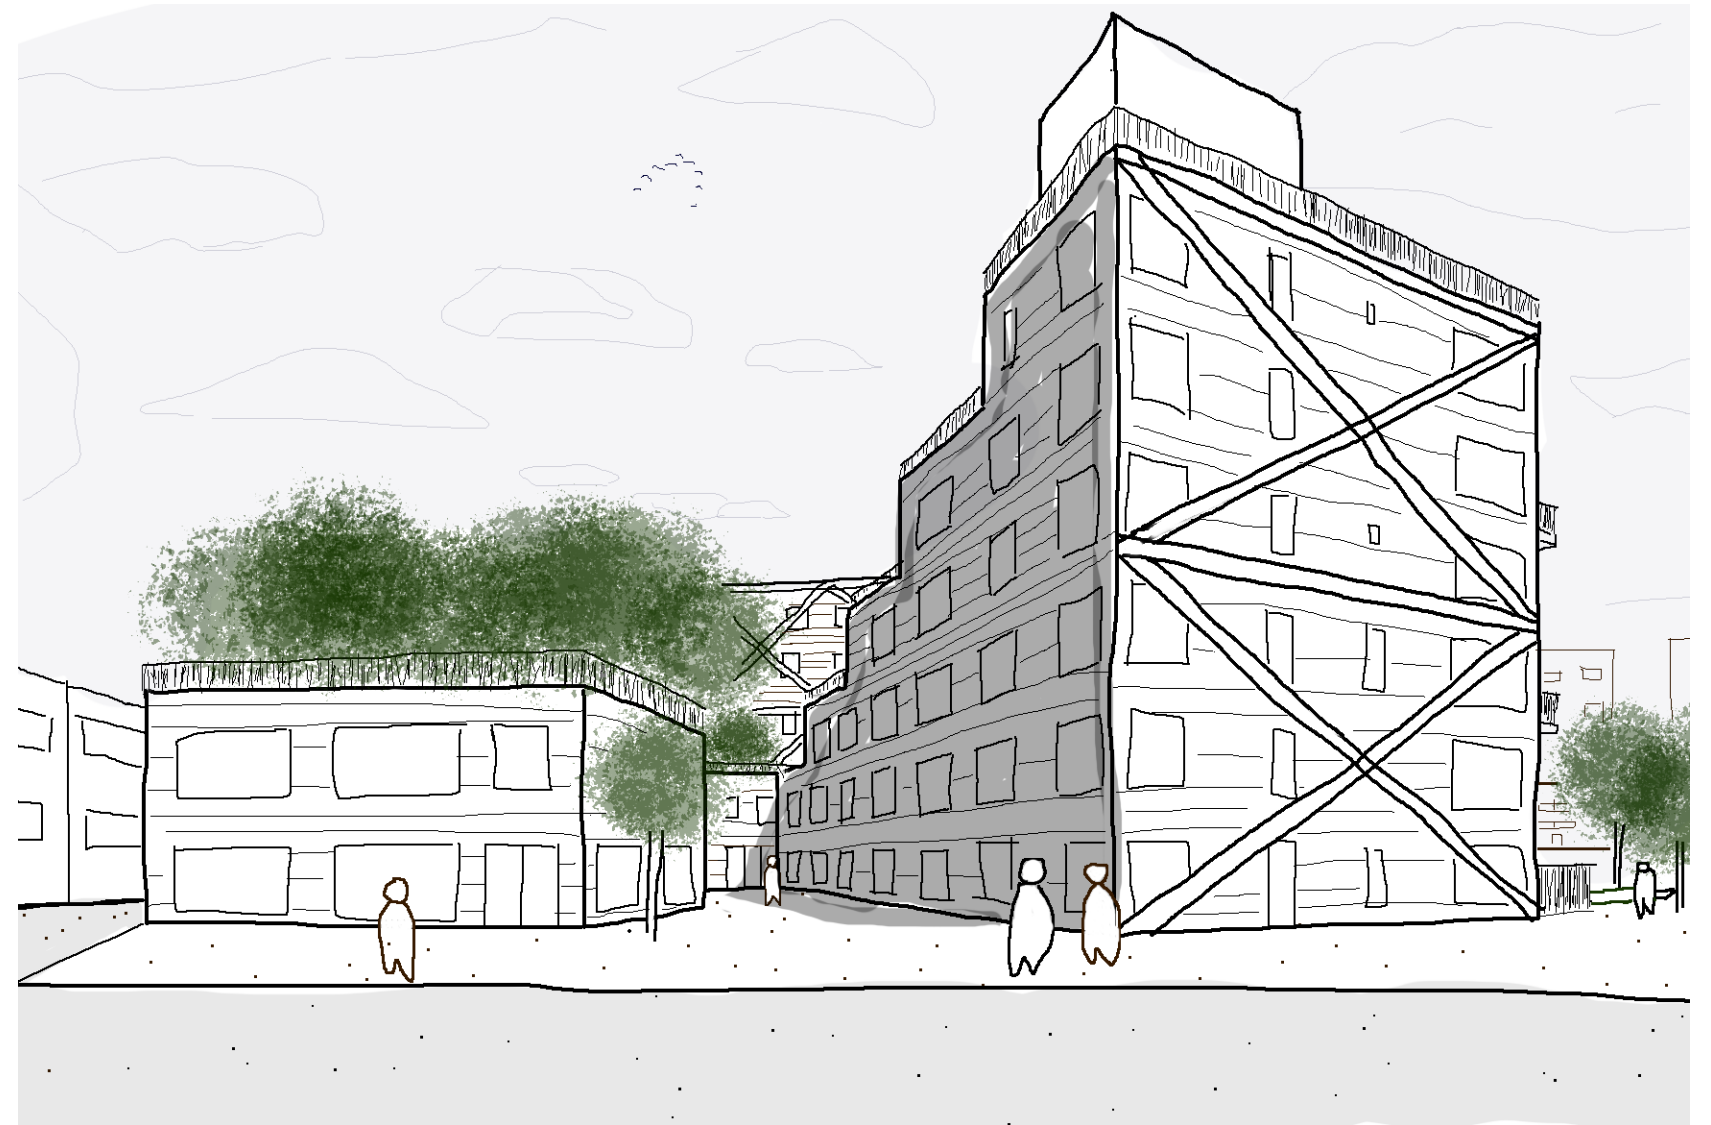

The final project of my first semester of junior year, Albany Park Playground aims to create a statement in the Albany Park community of Chicago. Placed next to a train stop, the multi-use building features a cafe, basketball court, classrooms, and a terrace for public use. The swooping curves, large curtain walls, red color, bold columns, and suspended floors add to the “playground” function that the building invites. The building draws inspiration from Parc de la Vilette with the red drawing the visitor in and to enjoy the space.
